

7220 Series

1-kVA, DC-enabled Linear Power Amplifiers

Performance Overview:

- Up to 1000 watts RMS power output
- Small signal response up to 1 MHz
- Up to 16A at 13.5 VDC
- Can be used to create series or parallel systems for up to 3 times the voltage or 4 times the current output.

7224

AC Power at 20 kHz: 900 watts RMS
 For High-Power Applications to: 100 kHz
 Small Signal: 8V_{p-p} to 400 kHz
 DC Power: 16A at 13.5 VDC

7226

AC Power at 20 kHz: 900 watts RMS
 For High-Power Applications to: 150 kHz
 Small Signal: 8V_{p-p} to 600 kHz
 DC Power: 16A at 13.5 VDC

7228

AC Power at 20 kHz: 1000 watts RMS
 For High-Power Applications to: 200 kHz+
 Small Signal: 8V_{p-p} to 1 MHz
 DC Power: 16A at 13.5 VDC

Features

- Field-selectable controlled-voltage or controlled-current operation.
- Can be switched between rail supply modes and voltages to optimize for various load impedances.
- Protection circuits guard against over/under voltage, over current, over temperature, and circulating ground currents.
- DC blocking, DC Servo and user-variable current limit functions (7228 model only).

AE Techron's **7220-Series** amplifiers, when used with a signal generator such as the AE Techron 3110, can simultaneously produce both the DC voltage needed to drive the DUT and the high-frequency (AC ripple) conducted interference waveform required in cranking tests found in Standards like FMC1278. They can also be used to perform surge and dropout tests found in many automotive Standards, like GMW3172-07, ISO 7637-2, and SAE J1113/2.

When used with AE Techron's T-Series coupling transformers (T1000, T2000 and T3700), 7220-Series amplifiers are ideal for use in the low-voltage conducted or radiated immunity tests needed for Aviation industry Standards like DO 160 (Section 18 and 19), MIL STD 461/462 (CS101 and RS101), Airbus and Boeing audio bandwidth electrical and magnetic tests.

The 7220-Series amps are a perfect choice to drive small to medium Helmholtz coils and radiators like those specified in FMC1278 (RI140, RI150).

DC Specifications – High-Current Mode

VDC	OUTPUT (Amperes)	
	1 Hour, 100% Duty Cycle	
	7224 and 7226	7228
48	12	16
24	20	25
13.5	16	16

Comparison

Features	7224	7226	7228
Switch between rail supply mode and voltages to optimize for various load impedances	Requires opening of case	Requires opening of case	Back-panel switch
Change from controlled-voltage to controlled-current operation	Requires opening of case	Requires opening of case	Back-panel switch
Parallel operation	Optional	Optional	Back-panel switch
Series operation	Optional	Optional	Back-panel switch
Ground-lift / circulating current protection	External resistor/fuse	External resistor/fuse	Resettable protection circuit
DC Block enable/disable	N/A	N/A	Back-panel switch
User-variable current limit	N/A	N/A	Back-panel switch
DC Servo enable/disable	N/A	N/A	Back-panel switch
