## ARB Rider 4012 Technical Datasheet

### DUAL CHANNEL – ALL IN ONE: Function Generator, Arb Generator and Digital Pattern Generator.

- 2 Analog Channels
- 1.2 GS/s 14 Bit Vertical Resolution
- 300 MHz Bandwidth
- Up to 24 Vpp Output Voltage and  $\pm 12V$  HW Baseline Offset.  
Total Output Voltage Window  $\pm 24V$  (48 Vpp) into High Impedance.
- Up to 128 Mpts Waveform Memory per Channel
- Rise and fall time less than 1.1 ns
- 8 Digital Channels in synchronous with analog Generation
- Simple Rider™ UI: designed for touch AWG/AFG user interfaces.

### Key performance specifications

- AFG Mode
  - 300 MHz Sine Waveforms
  - 1.2 GS/s fixed, 14-bit vertical resolution
  - Amplitude up to 12 V<sub>p-p</sub> into 50  $\Omega$  load
  - Programmable hardware offset:  $\pm 6V$  into 50 Ohm
  - Improved DDS based technology
- AWG Mode
  - 1.2 GS/s Variable Clock, 14-bit vertical resolution
  - 8-bit digital channels
  - Up to 128 Mpts Waveform Memory per Channel
  - 318 MHz Calculated Bandwidth
  - Amplitude up to 12 V<sub>p-p</sub> into 50  $\Omega$  load
  - Programmable hardware offset:  $\pm 6V$  into 50 Ohm

### Features & Benefits

- Sample rate can be programmed in from 1 S/s to 1.2 GS/s, with 14-bit vertical resolution, ensures exceptional signal integrity
- Arbitrary waveform memory up to 128 Mpts for each analog channel
- Mixed Signal Generation – 2 Analog channels with 8 synchronized Digital Channels for debugging and validating digital design.
- Two operation modes – Simple Rider AFG (DDS AFG mode) and True Arb (variable clock Arbitrary AWG mode)
- Digital outputs provide up to 1.2 Gb/s data rate in LVDS format. LVDS to LVTTTL adapter is available
- Programmable Multi Level Marker output for triggering and synchronization
- Advance sequencer with up to 16384 user defined waveforms provides the possibility of generating complex signal scenarios with the most efficient memory usage
- Windows based platform with 7in touch screen, front panel buttons and knob
- Compact form factor, convenient for bench top and fully fit with 3U – 19" rackmount standard
- LAN interfaces for remote control

## Applications areas

### Automotive

Today's cars are including a lot of highly sophisticated electronic control unit with very sensitive electronic components. The Arb Rider 4012 combining 1.2 GS/s with 14 vertical resolution, represents an ideal tool for successfully addressing the new testing challenges in automotive.

- CAN, CAN-FD, LIN, Flexray, SENT emulation
- EMI debugging, troubleshooting and testing
- Electrical standards emulation up to 24V
- Power MOSFET circuitry in automotive electronics optimization

### IoT and Ind 4.0 perfect RF Modulator

Arb and Function Riders will be the iconic instrument for this applications. The possibility to emulate complex RF I/Q modulation for simulation and Test vs wireless devices or working on Internet of things of industry 4.0 applications. Each engineer may use the possibility to import waveform to emulate devices under test, impose distortion on waveform (such noise) to test the ability of devices to be compliant to the standards.

### Research Applications

Research centers and Universities, are key users of Arb Rider generator's series.

Complex waveform and/or sophisticated Pulses emulation based on variable edges or multilevel could be perfectly created. The combination of fast edge generation, excellent dynamic range and easy to use user interface meet perfectly scientists and engineers working on large experiments such Accelerators, Tokamak or synchrotrons to emulate signals without creating specific test boards.

- Emulation of detectors
- Emulation of signal sources adding noise
- Generation/playback of real-world signals
- Emulation of long PRBS sequences
- Modulating and driving laser diode

### Aerospace and Defense applications

Electronics warfare signals driven by Radar or Sonar systems perfectly match with these generators. Large BW Riders can be used on digital modulation systems for Radio Applications or others I/Q signal modulation.

Pulses may be easily generated for applications such Pulse Electron Beam or X Ray Sources, Flash X-ray Radiography, Lighting pulse simulators, high Power Microwave modulators.

- Frequency response, intermodulation distortion and noise-figure measurements
- Phase Locked Loop (PLL) pull-in and hold range characterization
- Radar base-band signals emulation

### Semiconductors Test

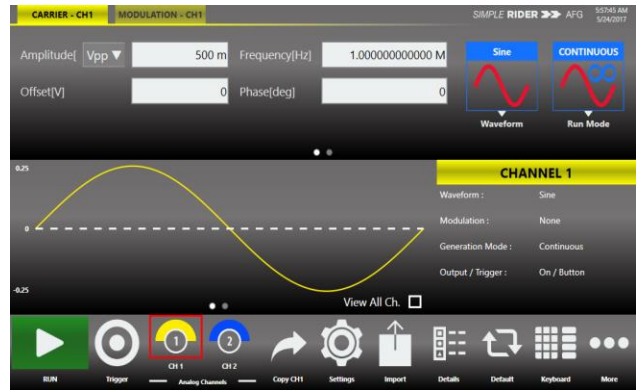

Emulation of complex signals generated with inclusion of noise or distortions may become an excellent way to provide Compliance Components Test to help semiconductors engineers. The fast edges and pulse generation can be used to provide characterization in fast power devices.

- Clock and Sensor signals generation
- MOSFET gate drive amplitude signal emulation
- Power up sequences of IC using the low impedance feature (5  $\Omega$  output impedance)

## Simple Rider AFG: Function Generator Mode Interface

**Simple Rider AFG** UI is designed for touch and it has been developed to put all the capabilities of modern Waveform Generators right at your fingertips. All instrument controls and parameters are accessed through an intuitive UI that recalls the simplicity of Tablets and modern smart phones: touch features and gestures are available to engineers and scientists to create advanced waveforms or digital patterns in few touches.

- The swipe gesture gives easy access to the output waveform parameters
- A touch-friendly virtual numeric keypad has been designed to improve the user experience on entering the data.
- Time saving shortcuts and intuitive icons simplify the instrument setup.

## Simple Rider TrueArb: AWG and DPG Mode Interface

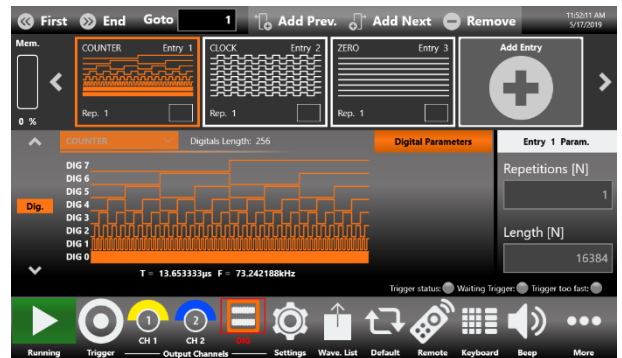

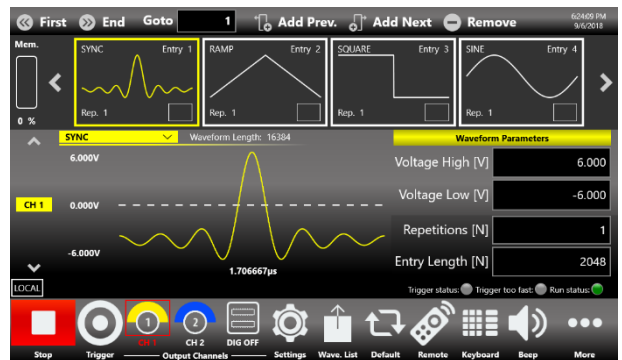

In **Simple Rider True-Arb** interface, the users can define complex waveforms with up to 16,384 sequence entries of analog waveforms and digital patterns, define their execution flow by means of loops, jumps and conditional branches.

Digital output combined and synchronized with analog output signals represent an ideal tool to troubleshoot and validate digital design.

The waveform memory length of up to 128 Mpoints on each channel combined with up to 16,384 and up to 4,294,967,294 repetitions, make the Arb-Rider 4012 the ideal generator for the most demanding technical applications.

Thanks to the intuitive and easy waveform sequencer user interface, the most complex waveform scenarios can be created with just few screen touches.

Arb Rider supports the standard Ethernet interface for remote control and easy customized instrument programming.

All specifications are typical unless noted otherwise. The guaranteed performance are referred to a calibrated instrument that has been stored for a minimum of 2 hours within the operating temperature range of 5 °C to 40 °C and after a 45-minute warm up period. Within  $\pm 10$  °C after auto-calibration.
